

Part 1: Tell us about your closed test

The information you provide in the "About your closed test" section helps us to ensure that apps have been satisfactorily tested before they're published on Google Play. This helps us to protect users from low-quality apps, prevent the spread of malware, and reduce fraud.

Here's what you need to share to complete this section:

1. Let us know how easy you found it to recruit testers for your app by selecting one of the options listed. This helps us to understand how developers are experiencing Google Play's testing requirements.

We recruited testers through a paid testing provider (Testers Community) to get structured feedback across devices and Android versions.

In addition to the external testers, I (the developer) ran regular on-device checks throughout the closed test, focusing on technical stability, UI/layout consistency, and alignment between the Play listing and the app. We also consulted a small number of people from our target audience—residents, family and visitors familiar with Kala Nera and Pelion—to validate real-world use cases.

2. Provide information about the engagement you received from testers during your closed test. Examples of relevant information here includes:
 - Whether testers used all of your app's features
 - Whether your testers' usage was consistent with how you would expect a production user to use your app and, if not, the differences you would expect to see.

Testers actively used the app across its main flows: browsing the local business directory (categories and A–Z list), opening business detail pages (call, website, maps), saving favorites, checking estimated bus departure times for the Kala Nera stop (direction, day, and time filters), and exploring the Pelion Guide section (flights, regional events, useful numbers, and bus). Usage was largely consistent with how we expect production users to behave—short, task-focused sessions to find a place to eat or stay, plan a bus trip, or look up practical travel information. Testers sometimes tested all screens more systematically; real users more often arrive directly for a single task (e.g., restaurant or bus time). Some testers also explored both English and Greek versions of the app.

3. Finally, summarize the feedback that you received from testers, and let us know how you collected this feedback.

Feedback: Testers reported strong stability (no critical crashes), clear navigation, and useful core features (directory, favorites, bus timetable, Pelion Guide). Suggestions included improving Play Store discoverability (ASO and listing text), clearer store screenshots, optional first-time tips for new users, and an in-app link to rate the app on Google Play.

How we collected it: Structured written reports from the testing provider, plus direct follow-up on usability and store-listing recommendations.

Part 2: Tell us about your app/game

The information you provide in the "About your app/game" section helps us to learn more relevant information about your app or game to better understand your app or game. Your answers are not shown on Google Play, and won't affect the features and services you can access in Play Console, how your app or game is displayed, or your eligibility for Google Play developer programs.

Here's what you need to share to complete this section:

4. Let us know who is the intended audience of your app or game. Please be as specific as possible.

Kala Nera Guide is for tourists and residents in Kala Nera, Kato Gatzea, Koropi, and visitors exploring the Pelion coast in Greece. The audience includes travelers planning meals, accommodation, or shopping; people who need local services and contact details; and users who want practical trip information (bus times, flights to Volos airport, regional events, useful phone numbers). The app is bilingual (English and Greek).

5. The second question varies slightly depending on whether you're an app or game developer:

- For apps: Describe how your app provides value to users. If you're not sure what we mean by this, visit the Android Developers site to learn more about app quality on Google Play.
- Kala Nera Guide helps visitors and locals find places to eat, stay, and shop; save favorites on the device; check estimated bus departure times for the Kala Nera stop (not an official timetable—confirm with KTEL); and use practical Pelion information (flights, events, useful numbers). Installable via Google Play as a PWA. English and Greek. Internet required for current data; favorites stay on the device.
- For games: Describe what makes your game stand out.

6. Let us know how many installs you expect your app or game to have in its first year. The range options are wide, so choose the option that you think is most likely. It's okay if this is just a rough estimate.

- 1,000 – 10,000 : Niche, location-based guide

Part 3: Tell us about your production readiness

The information you provide in the "About your production readiness" section helps us to understand whether your app or game is ready for production.

Here's what you need to share to complete this section:

7. Let us know what changes you made to your app or game based on what you learned during your closed test.

Based on closed testing and store feedback, we:

- Improved overall UI and navigation (magazine-style home, clearer business listings and detail pages)
- Expanded and refined bus estimated departure times for Kala Nera stop (direction, day, and time filters) with clear disclaimers and links to official KTEL information
- Added a clearer Pelion Guide hub (flights, events, useful numbers, bus)
- Fixed Favorites opening correctly from business pages
- Polished performance, layout and stability across tested devices
- Updated Play Store listing text and screenshots where applicable to better reflect current features (directory, bus, favorites, Pelion Guide)
- We are continuing to evaluate optional first-time tips and an in-app “rate the app” link as follow-up improvements

8. Describe how you decided that your app or game was ready for production.

We ran a closed test for the required period with at least 12 testers on multiple devices. Testing found no critical crashes and confirmed that core flows work as intended: directory browse/search, business details, favorites, bus estimated departure times for the Kala Nera stop, and Pelion Guide. We addressed actionable feedback (UI clarity, bus and guide discoverability, favorites fix, listing/screenshots alignment).

Besides incorporating external test feedback, I validated each release on real Android devices, reviewed layout and navigation across main flows, and confirmed that disclaimers (e.g. estimated bus times, not an official timetable) and privacy information match the shipped build.

The current release (3.1.x) matches what we describe on Google Play, privacy information is published on kalanera.gr, and we monitor feedback via info@spiti.tech.
